

Campagnolo[®]

YPSILON with its Oxide finish fulfills this requirement perfectly. It is a light weight, professional quality clincher rim made with an alloy that has superior technical features.

Both its ultimate tensile strength and plastic deformation limit are far above that of other rims in its price range. The Oxide finish amplifies its good qualities even more, giving the rim a very competitive price/quality ratio.

The OMICRON series has

been made especially for the OEM. In fact, it has been designed for use with automated wheel building machinery.

Because it features Campagnolo's patented, double oriented spoke eyelet, it is well suited for the rigors of cycle touring.

Its heat treated aluminum alloy gives it the strength necessary for carrying extra loads. OMICRON rims are available in versions: Polished and Electrox.

GAMMA: this is a product

designed for the OEM. It is also designed for use with automated wheel building machines and offers a superior quality/ratio.

Utilizing heat treated aluminum alloy it features well balanced transverse and vertical rigidity factors, qualities necessary for good stability at the output point of automated assembly.

CROCHET PROFILE	CAT. NO.	TYPE	FINISH	DRILLING	WEIGHT ~ gr.	EYELET	TIRE
	P0222	OMEGA STRADA V PROFILE	HARDOX	28-32-36	440	without eyelets	clincher 19-25
	P0322	YPSILON STRADA V PROFILE	OXIDE	32-36	440		
	P0232	LAMBDA STRADA V PROFILE	POLISHED	32-36	440		
	P0272	OMICRON STRADA	POLISHED	32-36	480	double patented positioned eyelet	clincher 19-25
	P0352	OMICRON STRADA	ELECTROX	36	480		
	P0282	GAMMA STRADA	POLISHED	32-36	480	single eyelet	clincher 19-25
	P0332	GAMMA STRADA	ELECTROX	36	480		

The weights are for rims without eyelets. The rims with Crochet profile (13C) can have a difference of weight by $\pm 3.5\%$. Weight of one eyelet: for clinchers 1,14 gr. - N.B. «V Profile» rims are supplied without eyelets. Weight of one single eyelet 0,46 gr.
